

**Listing of Claims:**

Please amend the claims as follows:

1. (Currently amended) A system for locating a mobile unit including:  
means for transmitting a first signal at a relatively high power, from an access point;  
means for transmitting a second signal at a predetermined, relatively low power, from  
said access point;  
means for receiving said first signal, at a mobile device;  
means for determining a first signal strength of said first signal at said means for  
receiving said first signal;  
means for determining whether said first signal strength exceeds a relatively low  
threshold level so as to determine whether service may be provided;  
means for receiving said second signal, at said mobile device;  
means for determining a second signal strength of said second signal received at said  
means for receiving said second signal;  
means for determining whether said second signal strength exceeds a relatively high  
threshold level so as to locate the mobile unit within a known distance of said means for  
transmitting said second signal.
2. (Previously presented) A system according to Claim 1, wherein said relatively high  
power is at least 0 dBm.
3. (Previously presented) A system according to Claim 1, wherein said relatively high  
power is at least 6 dBm, 13 dBm or 20 dBm.
4. (Previously presented) A system according to Claim 1, said relatively low power is no  
more than 0 dBm.
5. (Previously presented) A system according to Claim 1, wherein said relatively low  
threshold level is no more than -85 dBm.

6. (Previously presented) A system according to Claim 1, wherein said relatively high threshold level is no less than  $-65$  dBm.
7. (Previously presented) A system according to any Claim 1, wherein said means for transmitting said first and second signals transmit said first and second signals at different times.
8. (Previously presented) A system according to Claim 1, which is a wireless local area network.
9. (Previously presented) A system according to Claim 8, wherein said means for transmitting said first signal is an access point.
10. (Previously presented) A system according to Claim 8, wherein said means for transmitting said second signal is an access point.
11. (Previously presented) A system according to Claim 8, wherein said means (4) for receiving said first signal is a mobile unit.
12. (Previously presented) A system according to Claim 8, wherein said means (4) for receiving said second signal is a mobile unit.
13. (Previously presented) A system according to Claim 8, wherein said means for transmitting said first signal is a mobile unit.
14. (Previously presented) A system according to Claim 8, wherein said means (4) for transmitting said second signal is a mobile unit.
15. (Previously presented) A system according to Claim 8, wherein said means for receiving said first signal is an access point.

16. (Previously presented) A system according to Claim 8, wherein said means for receiving said second signal is an access point.

17. (Cancelled)

18. (Currently Amended) A system for locating a mobile unit including:  
a first transmitter for transmitting a first signal at a relatively high power, from an access point;  
a second transmitter for transmitting a second signal at a predetermined, relatively low power, from said access point;  
a first receiver for receiving said first signal, at a mobile unit;  
a first detector for determining a first signal strength of said first signal at said first receiver;  
a first controller for determining whether said first signal strength exceeds a relatively low threshold level so as to determine whether service may be provided;  
a second receiver for receiving said second signal, at said mobile unit;  
a second detector for determining a second signal strength of said second signal at said second receiver;  
a second controller for determining whether said second signal strength exceeds a relatively high threshold level so as to locate the mobile unit within a known distance of said means for transmitting said second signal.

19. (Previously presented) An access point configured for use in the system according to Claim 1.
